Objective

Final-year Computer Science student and Full Stack Developer with hands-on experience building secure, scalable backend architectures. Proven ability to bridge academic theory with industry practice by developing robust microservices and role-based enterprise applications in fast-paced team environments.

Education

Govt. Holkar Science college, Indore (Davv)

(2023– 2026)

Bachelor of Computer Application CGPA: 8.27

Technical Skills

- Backend Technologies:-** Java, Spring Framework, Spring Boot
- Web Technologies:-** HTML, CSS, Bootstrap, Js, React
- Database:-** MySQL
- Tools:-** GitHub, STS (Spring Tool Suite), Eclipse, VS Code, Postman
- Core concepts:-** OOP, MVC Architecture, Microservices, Hibernate, JPA, RESTful APIs

Projects

1. SettleSpot-

Developed a microservices Hostal searching & rental system where tenant can search and book and hosts can host their properties with backend using Spring Boot, Spring Security (JWT), Eureka Server, API Gateway & Feign Client, implementing secure authentication & perform CRUD operations.

2. Sports Management System | Java Swing, MySQL, JDBC

Developed a Java Swing-based Sports Management System with MySQL and JDBC, implementing MVC architecture to manage sports events, teams, and registrations through an interactive GUI.

Training

ITEP - InfoBeans Foundation

(Jun 2025)

- Developed backend modules using Java, JDBC, Spring Boot, and MySQL.
- Built and tested RESTful APIs implementing CRUD operations.
- Designed normalized database schemas improving data consistency.
- Implemented MVC architecture for clean and maintainable code.
- Used Git and GitHub for version control and collaboration.

Professional Skills

- Communication Skills
- Team Collaboration
- Adaptability
- Time Management
