Summary

Motivated Java Full Stack Developer and Final Year BCA student with a strong foundation in backend architecture, microservices, and modern frontend frameworks. Passionate about building scalable web applications and currently advancing technical skills through intensive training at InfoBeans Foundation. Experienced in Java, Spring Boot, and React through hands-on academic and personal projects.

Skills

Backend Technologies: Java, Spring Framework, Spring Boot

Web Technologies: HTML, CSS, Bootstrap, JavaScript, React

Databases: MySQL

Tools: GitHub, STS (Spring Tool Suite), Eclipse, VS Code, Postman

Core Concepts: OOP, MVC Architecture, Microservices, Hibernate, JPA, RESTful APIs

Training

Developer Trainee

July 2025 – Present

InfoBeans Foundation

Tools: Java, Spring Boot, MySQL

- Undergoing comprehensive training on enterprise Java architectures, Spring frameworks, and database configuration logic.
- Implementing Data Structures and Algorithms (DSA) to solve complex programming challenges, improving logic execution and runtime efficiency.
- Building mock services and mapping configurations to simulate end-to-end data flows within web applications.

Projects

TeamForge (Company Management System) | *Spring Boot, React*

- Architected a scalable system flow using Spring Boot controllers and a React frontend to manage organizational structures.
- Developed dynamic web dashboards enabling administrators to track company objectives, user profiles, and team assignments.
- Designed and optimized secure REST API endpoints to process user operations and department tracking logic accurately.

SettleSpot (Microservices Application) | *Spring Cloud, Java, MySQL*

- Designed an independent microservices-based architecture configured with centralized service discovery mechanisms (Netflix Eureka).
- Mapped custom database triggers and relational tables to handle data persistence and dynamic events flawlessly across services.
- Constructed modular decoupled backend environments to safeguard fault isolation and independent components deployment.

Sports Management System | *Java Swing, MySQL, JDBC*

- Developed an interactive GUI-based Sports Management System using Java Swing to efficiently manage sports events, teams, and user registrations.
- Implemented Model-View-Controller (MVC) architecture to maintain a clean, scalable separation between the frontend interface and backend logic.
- Integrated a MySQL database using JDBC for robust relational data management and secure data persistence.

Education

Bachelor of Computer Applications (BCA) | CGPA: 8.2/10

June 2026

Govt. Holkar Science College, Indore
